

The International Joint Symposium & Workshop on Transit-Oriented Development 2026

Seoul, Korea, August 2-12, 2026

The Symposium & Workshop

The International Joint Symposium & Workshop on Transit-Oriented Development 2026 will be held in Seoul, Korea, from August 2 to 12, 2026. The event brings together international researchers and students to explore the future of cities shaped by high-speed rail, artificial intelligence (AI), and emerging mobility systems. The main program includes lectures, technical tours, and collaborative workshops, with Seoul as a living case study. Further details will be announced soon.

Participating Universities

This symposium and workshop bring together distinguished academic institutions from around the world, with expertise in urban planning, transportation, architecture, and smart city development.

- University of Seoul
- University of Texas at Austin
- Kumamoto University
- Kyoto University
- Xi'an Jiaotong-Liverpool University
- Tongji University
- Széchenyi István University
- Håme University of Applied Sciences
- Kyung Hee University
- Inha University
- Gachon University

Location

Mirae Hall, University of Seoul in Seoul, Korea.

Important Dates

August 2 : Arrival & Check-in
August 3 : Symposium
August 4-12 : Team Workshop & Presentations
Three site visits are planned during the workshop period (e.g., GTX-A).

Organizing Committee

- Seungjae Lee, University of Seoul, Korea
- Ming Zhang, The University of Texas at Austin, USA
- Takuya Maruyama, Kumamoto University, Japan
- Juhyun Lee, Xi'an Jiaotong-Liverpool University, China
- Haixiao Pan, Tongji University, China
- Tomoki Nishigaki, Kyoto University, Japan
- Boldizsár Tű-Szabó, Széchenyi István University, Hungary
- Sonja Heikkinen, Häme University of Applied Sciences, Finland
- Kwangyul Choi, Inha University, Korea
- Kyungeun Hwang, Kyung Hee University, Korea
- Jeong-Il Park, Gachon University, Korea
- Sungjin Park, Spark City, Korea
- Sion Kim, University of Seoul, Korea
- Juhyeon Kwak, University of Seoul, Korea

Notice

- There is **no registration fee**, and each participant covers accommodation and expenses through **self-funding**.
 - * Participants who wish to use the on-campus dormitory should inform the organizing committee in advance. Please note that personal items, including a sleeping bag and towels, should be prepared individually.
- The overall schedule, program components, and activities remain subject to refinement as planning progresses.
- **(Optional)** The workshop program includes two dinners. Participants who wish to attend these dinners will be asked to pay an additional fee at registration.
 - * Welcome Dinner: 20,000 KRW / Farewell Dinner: 30,000 KRW

Study Site

The workshop will use Seoul as a living case study to explore Transit-Oriented Development, multimodal transfer systems, high-speed rail, and emerging mobility environments. The following study sites are suggested as potential destinations for site visits and team-based fieldwork. Students may visit one or more sites depending on their team topic, research interest, and logistical conditions.

- Cheongnyangni Station Transfer Center
- Seoul Station Transfer Center
- GTX-A Northern Section
- GTX-A Southern Section
- Seoul Museum of History

Program

[Day 1] August 2 (Sun.)

Time	Contents
10:00~18:00	Arrival & Check-in

[Day 2] August 3 (Mon.)

Time	Contents
Symposium (Location: Mirae Hall, B101)	
09:00~10:00	Registration
10:00~10:10	Welcome Speech Prof. Seungjae Lee, Prof. Ming Zhang
10:10~10:40	Lecture 1: Rethinking Walkability: A Thermal Perspective for TOD and Beyond Prof. Ming Zhang (University of Texas at Austin)
10:40~11:10	Lecture 2: Transit-Oriented Development for Future Cities Prof. Seungjae Lee (University of Seoul)
11:10~11:40	Lecture 3: Transit-Oriented Development in the Age of AI, Climate Change and Aging Societies Prof. Kwangsik Kim (Sungkyunkwan University)
11:40~12:10	Lecture 4: Introduce KORAIL's background and its TOD effort KORAIL
Teamwork (Location: Mirae Hall, B101)	
14:00~15:00	Introducing the workshop project
15:00~17:00	Students' self-introductions, including academic background, hometown, hobbies, etc. (Informal; 1~2 PPT slides would be very helpful)
17:00~18:00	Team Formation Explore the selected topic in detail and narrow it down to specific issues and tasks.
18:00~	Welcome Dinner

[Day 3] August 4 (Tue.)

Time	Contents
Workshop (Location: Mirae Hall, B101)	
10:00~10:30	Lecture 1: Japanese experience TOD Prof. Takuya Maruyama (Kumamoto University)
10:30~11:00	Lecture 2: Rethinking the Reach of Transit-oriented Development on Housing Value Prof. Kwangyul Choi (Inha University)
11:00~11:30	Lecture 3: Developing Transport Infrastructure in Seoul Dr. Chang Yi (The Seoul Institute)
11:30~12:00	Wrap up
Teamwork (Location: Mirae Hall, B101, B102)	
14:00~18:00	Develop a teamwork plan and specify deliverables and timeline. Introduce workshop data and analysis programs.

[Day 4] August 5 (Wed.)

Time	Contents	
Workshop (Location: Mirae Hall, B101)		
10:00~10:30	Lecture 1: Reimagining Industry in the City: Digital Manufacturing and the Return of Urban Production	Prof. Jeong-Il Park (Gachon University)
10:30~11:00	Lecture 2: Designing Cities for Urban Robotics: Multidimensional Considerations for Future Urban Environments	Dr. Sungjin Park (Sparkcity)
11:00~11:30	Lecture 3: DRT and The Future of Mobility - A Model for Equitable Transport	Kristi Shalla (Embassy of Switzerland in the US)
11:30~12:00	Wrap up	
Teamwork (Location: Mirae Hall, B101, B102)		
14:00~18:00	Site visit Team members continue to work on their assigned tasks	

[Day 5] August 6 (Thu.)

Time	Contents	
Workshop (Location: Mirae Hall, B101)		
10:00~10:30	Lecture 1: Zooming in and out of compact urban centers in a rapidly developed metropolis: A multi-scale investigation through an isobenefit lens in Seoul	Prof. Juhyun Lee (Xi'an Jiaotong Liverpool University)
10:30~11:00	Lecture 2: Community structure and robustness of railway network based on travel time competitiveness	Dr. Sion Kim (University of Seoul)
11:00~11:30	Lecture 3: Impact of media on autonomous buses	Dr. Tomoki Nishigaki (Kyoto University)
11:30~12:00	Wrap up	
Teamwork (Location: Mirae Hall, B101, B102)		
14:00~18:00	Site visit Team members continue to work on their assigned tasks	

[Day 6] August 7 (Fri.)

Time	Contents
Mid-term presentation (Location: Mirae Hall, B101)	
10:00~12:00	Each team gives a mid-term presentation followed by Q&A.
Teamwork (Location: Mirae Hall, B101, B102)	
14:00~18:00	Before the day ends, team members meet to revise tasks and deliverables in response to reviewers' feedback.

[Day 7~8] August 8 (Sat.) ~ August 9 (Sun.)

Time	Contents
Teamwork (Location: Mirae Hall, B101, B102)	
10:00~18:00	Team members continue to work on their assigned tasks

[Day 9] August 10 (Mon.)

Time	Contents
Workshop (Location: Mirae Hall, B101)	
10:00~10:30	Lecture 1: TOD Model Recalibration in China Prof. Haixiao Pan (Tongji University)
10:30~11:00	Lecture 2: Network Construction Strategies for the Activation of Autonomous Mobile Robots Mr. Sungjin Park (University of Seoul)
11:00~11:30	Lecture 3: Road Crack Segmentation Using UAV Imagery and Deep Learning for Efficient Road Maintenance Management Mr. Yongryeong Lee (University of Seoul)
11:30~12:00	Lecture 4: Autonomous and robot public transport (Online, Tentative) Dr. Teppo Sotavalta (Häme University of Applied Sciences)
Teamwork	
14:00~18:00	Team members continue to work on their assigned tasks

[Day 10] August 11 (Tue.)

Time	Contents
Workshop (Location: Mirae Hall, B101)	
10:00~10:30	Lecture 1: Bio-Inspired Routing Optimization for Complex Logistics Problems Prof. Boldizsár Tüü-Szabó (Széchenyi István University)
10:30~11:00	Lecture 2: Disaster Evacuation Analysis in Deep Underground Multi-Level Buildings Using an Agent-Based Model Mr. Jongwon Lee (University of Seoul)
11:00~11:30	Lecture 3: Multi-scale Walkability Measurement Framework : Application to Market Activity Analysis Dr. Ilho Jeong (University of Seoul)
11:30~12:00	Wrap up
Teamwork (Location: Mirae Hall, B101, B102)	
14:00~18:00	Team members continue to work on their assigned tasks

[Day 11] August 12 (Wed.)

Final presentation (Location: Mirae Hall, B101)	
Time	Contents
9:00~12:00	Assemble individual work from team members. Prepare for the final presentation.
12:00~14:00	Lunch break
14:00~18:00	Each team delivers its final presentation, followed by Q&A. Before the day ends, team members compile and submit final products and clean up the workspace.
18:00~	Farewell Dinner

Enquiries

For more information, contact the secretaries:

- Sion Kim, Research Professor, University of Seoul - whdlem302@naver.com
- Juhyeon Kwak, Research Professor, University of Seoul - juhyeon3266@uos.ac.kr
(WhatsApp: +82 10-6549-3266)

We are pleased to welcome you to Seoul for the International Symposium & Workshop on Transit-Oriented Development 2026.

As one of Asia's most connected and evolving cities, Seoul provides a compelling context for exploring how high-speed rail, artificial intelligence, and urban mobility are reshaping metropolitan futures.

*We look forward to welcoming you to Seoul, Korea!
With warm regards,
Seungjae Lee & the Organizing Committee*

Attendees List (Speakers)

Name	Affiliation
Prof. Ming Zhang	University of Texas at Austin
Prof. Seungjae Lee	University of Seoul
Prof. Takuya Maruyama	Kumamoto University
Prof. Haixiao Pan	Tongji University
Prof. Juhyun Lee	Xi'an Jiaotong Liverpool University
Ms. Kristi Shalla	Embassy of Switzerland in the United States
Prof. Boldizsár Tüü-Szabó	Széchenyi István University
Dr. Tomoki Nishigaki	Kyoto University
Prof. Kwangsik Kim	Sungkyunkwan University
Prof. Kwangyul Choi	Inha University
Prof. Jeong-Il Park	Gachon University
Dr. Chang Yi	The Seoul Institute
Dr. Sungjin Park	Sparkcity
Dr. Teppo Sotavalta	Häme University of Applied Sciences
Dr. Sion Kim	University of Seoul
Dr. Juhyeon Kwak	University of Seoul
Dr. Ilho Jeong	University of Seoul
Mr. Yongryeong Lee	University of Seoul
Mr. Sungjin Park	University of Seoul
Mr. Jongwon Lee	University of Seoul

Attendees List (Students)

Name	Affiliation
Bodria Banu	University of Texas at Austin
Camila De La O	
Brooke Frierson	
Piper Gilley	
Tabitha Guardiola	
Aubrey Harlan	
Lea Huber	
Hyukjoon Kwon	
Jeremy McCampbell	
Prasamsa Pokharel	
James Potts	
Cloe Schultz	
Harrison Wright	
Jaeyoung Chang	University of Seoul
Minsung Kim	
Hyunjung Jang	
Suhyeon Bang	
Dabin Yoon	
Hyeongjun Choi	
Eojin Yoo	Inha University
Jeongmin Lee	
Yoori choi	Gachon University

Appendix A. Dinner Venue Information

1. Welcome Dinner (20,000 KRW)

- Date and Time: August 3, 2026, 18:00~
- Venue: Oritte Dakhanmari (<https://maps.app.goo.gl/ynttaXgXhi4k1ASt9>)
- Menu: Samgyetang (Ginseng Chicken Soup)

* Samgyetang is a traditional Korean chicken soup made with a whole young chicken stuffed with rice, garlic, jujube, and ginseng. It is one of Korea's representative dishes and is especially popular as a nourishing meal.

2. Farewell Dinner (30,000 KRW)

- Date and Time: August 12, 2026, 18:00~
- Venue: On-campus venue, University of Seoul
- Menu: Korean-style Fried Chicken and Pizza

* The Farewell Dinner will be held on campus in a casual and informal setting. Chicken and pizza will be delivered and shared among participants after the final presentations. This dinner is intended to provide a relaxed opportunity for participants to celebrate the completion of the workshop, share reflections, and say goodbye to fellow participants.

Appendix B. Campus Map

https://www.uos.ac.kr/eng/web/contents/UOS_About_07_01_01

Appendix C. Study Site Information

1. Cheongnyangni Station Transfer Center

(<https://maps.app.goo.gl/JoxYaSExL6xTvQRT6>)

Cheongnyangni Station is one of the major railway and transit hubs in northeastern Seoul. It serves multiple rail and public transport functions, including metro, regional rail, buses, and intercity transport services. The station area is expected to become an even more important metropolitan transport hub in the future with the planned introduction of GTX-B and GTX-C lines. As a transfer center, the area provides an important case for examining passenger movement, modal integration, station-area development, pedestrian accessibility, and the relationship between transport infrastructure and surrounding urban activities.

- **Key observation points:**

- Multimodal transfer between rail, metro, bus, and pedestrian networks
- Future integration with GTX-B and GTX-C lines
- Passenger circulation and transfer convenience
- Station-area land use and commercial activities
- Pedestrian accessibility and wayfinding environment
- Potential issues and opportunities for TOD-based redevelopment

- **Access from the University of Seoul:**

- Walking: approximately 10–15 minutes
- Bus: approximately 5–10 minutes

2. Seoul Station Transfer Center

(<https://maps.app.goo.gl/cVFuMi2MfFLWoite8>)

Seoul Station is one of Korea's most important national and metropolitan transport hubs. It connects high-speed rail, conventional rail, airport rail, metro lines, buses, taxis, and pedestrian networks. The surrounding area also includes major business, commercial, historical, and public spaces. This site provides valuable opportunities to study large-scale transfer systems, urban connectivity, pedestrian networks, and the role of a central railway station in shaping metropolitan development.

- **Key observation points:**

- Integration of KTX, rail, metro, bus, taxi, and pedestrian systems
- Transfer efficiency and passenger flow
- Urban design and public space around the station
- Connectivity between the station and surrounding districts
- TOD potential and limitations in a dense urban area

- **Access from the University of Seoul:**

- Bus: approximately 45~50 minutes
- Subway: approximately 30 minutes

3. GTX-A Northern Section (Seoul Station ~ Unjeongjungang)

(<https://maps.app.goo.gl/Krw8t3XsNC8LqXZU7>)

The northern section of GTX-A, starting from Seoul Station and extending toward the northern metropolitan area, provides an important case for understanding how high-speed metropolitan rail can reshape regional accessibility and station-area development. This section can be used to examine the potential impacts of GTX on commuting patterns, urban growth, land use transformation, and the spatial relationship between Seoul and its surrounding metropolitan cities.

- **Key observation points:**

- Role of GTX-A in improving metropolitan accessibility
- Changes in station-area development potential
- Connection between high-speed rail and local transit systems
- Impacts on commuting behavior and regional urban structure
- Opportunities for TOD around GTX stations

- **Access from the University of Seoul:**

- Bus: approximately 45~50 minutes (to Seoul station)
- Subway: approximately 30 minutes (to Seoul station)
- In-vehicle travel time: approximately 20 minutes (one-way)

4. GTX-A Southern Section (Suseo Station ~ Dongtan)

(<https://maps.app.goo.gl/waKrUtJ1CfxqBwmf8>)

The southern section of GTX-A, starting from Suseo Station and extending toward the southern metropolitan area, offers another important perspective on high-speed metropolitan rail and TOD. Compared with the northern section, this area may require longer travel time from the University of Seoul, but it provides valuable opportunities to observe different urban contexts, station-area conditions, and development patterns. Students may compare the northern and southern sections to understand how the same rail infrastructure can interact with different urban environments.

- **Key observation points:**

- Station-area characteristics around the southern GTX-A corridor
- Connectivity between GTX-A, SRT, metro, bus, and local transport systems
- Differences between northern and southern GTX-A urban contexts
- Potential for TOD and mixed-use development
- Travel time, accessibility, and logistical considerations for site visits

- **Access from the University of Seoul:**

- Bus + Subway: approximately 60~70 minutes (to Suseo station)
- In-vehicle travel time: approximately 20 minutes (one-way)

5. Seoul Museum of History

(<https://maps.app.goo.gl/Y5QZTnjNel1ygtZD8>)

The Seoul Museum of History provides historical and urban context for understanding the long-term transformation of Seoul. The museum presents the city's development process, spatial structure, urban life, infrastructure, and planning history. For students participating in the workshop, this site can help build a broader understanding of how Seoul has evolved and how current urban and transport planning challenges are connected to historical urban development.

- **Key observation points:**

- Historical transformation of Seoul's urban structure
- Relationship between urban development and transport infrastructure
- Changes in land use, public space, and city form
- Historical context for contemporary TOD and mobility planning
- Seoul's identity as a rapidly evolving metropolitan city

- **Access from the University of Seoul:**

- Bus: approximately 50 minutes
